PitchSense AI — Product Narrative v1

Sep 30, 2026

Know every deal. Coach every rep. Forget nothing.

This document describes PitchSense AI in plain words: the problem it solves, who it's for, what it does and how we talk about it. It is the single source for landing pages, one-pagers, agency briefs, proposals and sales decks.

Written for: marketing, sales and leadership at PitchSense, and our design and agency partners.

Making material? Start at Part 2: The toolkit.

Part 1: The story

The problem

Sales teams have more data than ever and still lose deals to things they already knew. The knowledge exists; it's just scattered and forgotten.

1. **Calls disappear.** What the buyer said, worried about and asked for lives in a recording nobody replays.
2. **Deals go dark without warning.** Risks show up on calls and emails weeks before the forecast. Nobody connects them in time.
3. **Promises slip.** "I'll send that over Thursday" gets lost between back-to-back meetings. The buyer notices.
4. **Deals move in email and Slack too.** A buyer promises a document in an email; a deal update lands in a Slack thread. None of it reaches the CRM, and nobody notices when it goes quiet.
5. **The right content is never at hand.** The answer to the security question is in a deck somewhere. The rep improvises instead.
6. **Sales material is rebuilt by hand.** Reps copy last quarter's proposal, retype what the buyer said, and drift off brand and off message.
7. **Coaching is guesswork.** Managers can listen to a fraction of calls. Feedback comes late and nobody checks whether it worked.
8. **Knowledge walks out the door.** When a rep leaves, their deal history, relationships and context go with them.
9. **Every tool remembers one thing.** A notetaker, a CRM helper, a content tool and a training platform, each with its own partial memory, none talking to the others.

Our answer

PitchSense AI turns every sales conversation into intelligence your whole team can use, and never forgets it. Calls, emails, deals, documents and coaching all draw on one shared memory.

One line (pick one per channel)

- Know every deal. Coach every rep. Forget nothing.
- The sales AI that remembers everything.
- Every call understood. Every deal clear. Every rep ready.

30 words

PitchSense AI understands every sales call and deal and keeps it in one shared memory. Reps get briefs, follow-ups, on-brand proposals and practice. Managers see every deal clearly and coach what matters.

100 words

Your team's best knowledge is scattered: in recordings nobody replays, CRM fields nobody fills, decks nobody can find, and managers' heads. PitchSense AI brings it together. It captures every call,

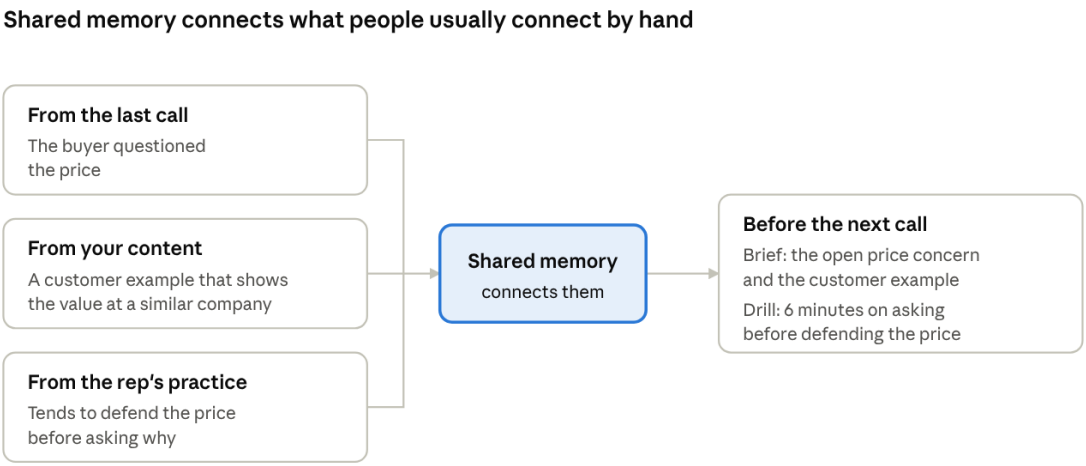

understands what was said and promised, and links it to the deal. It remembers all of it in one memory your company owns. Before a call, reps get a brief with everything that matters. After it, they get a summary, a follow-up draft, tracked commitments, and a one-pager or proposal in your brand. Managers see which deals are at risk and which skills need work. Reps practise hard moments with an AI buyer.

Connecting the dots

PitchSense remembers everything your team hears, says, promises and practices, in one memory your company owns. Every other part of the product reads it. This is our strongest advantage.

One shared memory matters because of what it lets PitchSense connect. It brings together information that usually sits in separate tools, so the rep knows what to do before the next call. For example:

> *The buyer questioned the price on the last call. Your rep tends to defend the price before asking why. Your company already has a customer example that shows the value. PitchSense remembers all three and puts them in the pre-call brief, with a 6-minute drill on handling price.*

Connecting the dots · one pricing example

No single tool sees all three: the call recorder has the objection, the shared drive has the example, and the manager knows the rep's habit. PitchSense remembers them in one place, and every point in the brief shows its receipt.

What it remembers

Layer	In plain words	Examples
What was said	Every call transcript, email, Slack thread and document	The discovery call with Acme, your pricing deck
What it meant	The promises, objections, risks, decisions and people behind the	"The CFO asked for ROI proof on

Layer	In plain words	Examples
	words, linked across calls	two calls in a row"
What happened next	What was done, whether promises were kept, whether coaching changed anything	"Security doc sent on Thursday, as promised"

Why one memory beats many

Other tools remember calls. PitchSense also knows how each rep practises, where they're strong and weak, and what content the company has. So each part of the product is smarter than it would be alone:

- **The pre-call brief** knows the buyer's open questions *and* that this rep struggled with pricing last time.
- **Coaching** is based on real deals, not generic skills.
- **Content suggestions** match the objection the buyer actually raised.
- **Proposals and one-pagers** are written from what the buyer actually said, in your brand.
- **Deal risks** come from what was said on every call and email, not only what someone typed into the CRM.
- **Deal status** comes from calls, emails and Slack, so nobody reads stale information or updates anything by hand.

Every answer shows its receipt. Each claim links to its source: the call, the moment and the quote. Nobody has to take the AI's word for it.

Knowledge stays when people leave. Deal history, promises and buyer context belong to the company, not to one rep's inbox.

What PitchSense does

Four areas of intelligence (calls, deals, content and coaching) run on one memory, with an AI agent that does the busywork. Headings below are internal; the customer-facing line under each is the one to use in copy.

Call intelligence

Customer-facing: "Understand every call."

Capability	What it does	Why it matters
Capture everywhere	Records and transcribes calls from Google Meet, Microsoft Teams and note-takers like Fireflies, Fathom and Granola. Our meeting bot and desktop recorder cover everything else, including in-person meetings	Every conversation is in, with no gaps

Capability	What it does	Why it matters
Pre-call brief	Before each meeting: who's attending, their company, past calls, open questions, what to watch for. Sent to Slack 30 minutes before	Walk in prepared without 20 minutes of digging
Smart summaries	Shaped to the call type (discovery, demo, pricing, renewal and more), with objections, decisions, next steps and promises	Read a call in two minutes
Receipts on every point	Each point links to the exact moment in the transcript	Check any claim at the source
Delivered where you work	Summaries land in Slack, email or Teams after the call	Nobody opens another app
Call scoring	Scores real calls on the skills your team cares about	See what good looks like, call by call

Deal intelligence

Customer-facing: "See every deal clearly."

Capability	What it does	Why it matters
Accounts and contacts, automatically	Creates companies and people from your calendar, then fills in company summary, logo, job titles and LinkedIn	No manual data entry
Connected history	Links calls to each other and to the deal, so the full story sits in one place	See how a deal got here
Commitments	Tracks every promise made on a call, in an email or in a Slack thread, by the rep or the buyer, with an owner, a due date and the quote. Reminds a day early	Promises stop slipping
Every channel, one deal	Reads email (Gmail, Outlook) and deal conversations in Slack, and links them to the right deal	Nothing about a deal lives only in someone's inbox

Capability	What it does	Why it matters
Missed-promise follow-ups	When a promise passes its date with nothing sent, PitchSense drafts the follow-up: a nudge if the buyer owes something, or the document or answer the rep promised. The rep sends it as is, edits it, or discards it	Deals keep moving without anyone tracking dates by hand
Current deal picture	Updates the deal from what's said in calls, email and Slack	No stale information, no manual ops work
Deal risks	Names warning signs from calls and emails (no decision maker, budget pushback, a quiet champion) and marks deals Watch or At risk	Trouble surfaces before the forecast call
Follow-ups	Drafts the follow-up email from what was actually said, then sends it once the rep approves	Faster follow-up, with a human in control
CRM updates	Updates CRM fields from calls, with approval	A clean CRM without typing

Content intelligence

Customer-facing: "The right answer in every conversation, and the right material after it."

Capability	What it does	Why it matters
Content Library	Upload PDFs, Word and PowerPoint files your team relies on	One home for approved content
AI search with citations	Ask a question and get the answer from your documents, with the source	Reps use the approved answer, not an old deck
Content in context	Suggests the right document for a call or follow-up, based on what the buyer asked	The security doc goes out when security came up
Create sales content	Drafts personalised one-pagers, decks and proposals from what was said on calls, the deal and your approved content. The rep edits, then exports to PDF,	Material written for this buyer, in minutes, not rebuilt from an old file

Capability	What it does	Why it matters
	PowerPoint or Word	
Your brand, built in	Enablement or Marketing sets brand guidelines, templates and approved messaging once. Everything PitchSense creates follows them	Every rep's material looks and sounds like the company
Practice from your content	Turns a pitch deck, product sheet or playbook into practice scenarios	Launches land with every rep, not just the top few

Coaching intelligence

Customer-facing: "Coach every rep, every week."

Capability	What it does	Why it matters
Your skills, your standards	Enablement sets the skills and scoring the team is measured on	Coaching matches how your company sells
Scores with evidence	Every scored call or practice session shows a score per skill, backed by quotes	Feedback reps trust
Coaching suggestions	When a score drops, the manager gets a suggestion on who needs help and on what	Managers spend time where it counts
One-click drills	The manager assigns a short, targeted practice with a note, then sees the before-and-after score	Coaching that gets checked, not just given
AI roleplays	Reps talk out loud with an AI buyer who pushes back like a real one. 11 scenario types, from cold call to closing, in English, Spanish and Portuguese	A safe place to get it wrong before it costs a deal
Drills and tracks	5-7 minute drills for one skill; learning paths that mix reading, roleplays and checks	Fits between meetings; structured onboarding
Readiness	Shows who is Ready and Not	Leaders know who can run the

Capability	What it does	Why it matters
	ready for each scenario	call before sending them
1:1 agenda	Builds the manager-rep one-on-one from recent calls and practice	Shorter, sharper 1:1s

The agent

Customer-facing: "An assistant that knows your business."

- **Ask anything in plain words.** "Which deals are at risk this week?" "Where is my team weakest?" "What does our pricing doc say about discounts?" Every answer cites its source.
- **Does the busywork.** Writes briefs, summaries, follow-up drafts, one-pagers, decks and proposals, and proposes CRM updates. Keeps each deal's status current from calls, email and Slack, so nobody updates it by hand.
- **Nothing happens without you.** The agent proposes; a person approves. It never sends or changes anything on its own.

Integrations

Google Workspace (Calendar, Gmail, Meet), Microsoft 365 (Outlook, Teams), Slack (deal conversations in, summaries and briefs out), note-takers (Fireflies, Fathom, Granola), CRM (Salesforce, HubSpot), plus our own meeting bot and desktop recorder. Admins connect the whole company at once, or people connect their own accounts. Sales content exports to PDF, PPTX and DOCX.

Use cases

We sell to sales leaders, enablement, RevOps and marketing at B2B companies. Reps and managers use it every day.

Who buys

Buyer	What keeps them up at night	What we promise
VP Sales / CRO	Deals slipping late, forecasts built on guesswork, slow ramp	Every deal's real story, from what was actually said, and a team that's ready
RevOps	Stale CRM, no single record of what was said and promised	Every call captured, understood and linked to the right deal and account
Head of Enablement	Content nobody finds, training that doesn't stick, no proof it worked	The right content in every conversation, and coaching measured on real skills
Marketing	Reps sending off-brand decks	One-pagers, decks and

Buyer	What keeps them up at night	What we promise
	and outdated messaging	proposals created in your brand guidelines, from approved messaging
Partner / channel leaders	Partner sellers who don't know the joint pitch	Partner-specific practice and shared deal context

Each row is a situation a buyer will recognise. Pick the rows for your reader's role.

Who	Situation	What PitchSense does	Result
Rep	Third call with a buyer, can't remember what was promised last time	Brief in Slack 30 minutes before: past calls, open questions, promises on both sides	Picks up exactly where they left off
Rep	Back-to-back calls, no time for notes	Summary of each call arrives in Slack, every point linked to the transcript	Notes done without typing
Rep	Promised the buyer a security doc by Thursday	The promise shows up on Home a day early, with the quote and the right doc from the Content Library	Keeps their word, keeps the buyer's trust
Rep	Buyer asks a tough integration question	Asks the agent; gets the answer from the approved docs, with the source	Answers correctly on the first try
Rep	The buyer's CFO joins the next meeting	Creates a one-pager for the CFO in your brand, from the goals and numbers the buyer shared; exports to PDF	Walks in with a page written for that CFO
Rep	Buyer asks for a proposal after the demo	Drafts the proposal in your template from the buyer's goals, stakeholders and timeline; exports to Word or PDF	Proposal out the same week, without rebuilding an old one
Rep	Buyer promised the security questionnaire	On Friday morning, flags it and drafts a	No deal stalls on a

Who	Situation	What PitchSense does	Result
	by Thursday; nothing arrived	short nudge; the rep approves and it sends from their inbox	forgotten promise
Rep	Promised a pricing answer by Friday; hasn't replied	Drafts the reply using the approved pricing doc; the rep sends, edits or discards	Every promise kept, on time
Rep	Big pricing conversation tomorrow	Runs a 6-minute drill with an AI CFO who pushes back on price	Walks in having already handled it once
Manager	Forecast call on Friday	Sees deals marked Watch or At risk, each with the call moment that raised the flag	No surprises at quarter end
Manager	Legal raised a concern in the deal's Slack channel	The concern shows on the deal, with a link to the thread	Always working from the latest picture
Manager	Eight reps, no time to listen to calls	Sees skill scores from real calls and a coaching suggestion when one drops	Coaches the right rep on the right skill
Manager	A rep keeps losing deals at discovery	Assigns a targeted drill with a note; checks the score on the next real call	Coaching that's measured, not guessed
RevOps	CRM is always out of date	Calls update CRM fields, with rep approval	Pipeline reviews based on what buyers actually said
RevOps	A rep leaves mid-quarter	Their deals, promises and buyer history stay in PitchSense for whoever takes over	No deal starts from zero
RevOps	Reps don't update deal status	Status updates from calls, email and Slack; reps only approve changes	Zero manual ops work, and a pipeline that's always current

Who	Situation	What PitchSense does	Result
Enablement	New product launch next month	Uploads the launch deck; PitchSense makes it searchable and builds practice from it	Every rep can pitch it on launch day
Enablement	Leadership asks "did training work?"	Shows skill scores on real calls before and after	A clear answer backed by evidence
Marketing	Reps keep editing old decks and drift off message	Everything PitchSense creates uses the current templates and approved messaging	Brand and messaging stay consistent across the team
Sales leader	Board meeting next week	Asks the agent: "Why did we lose deals to competitors this quarter?"	An answer in seconds, with the calls behind it

What makes us different

Sybill and Aida remember deals. PitchSense remembers deals *and* people's skills, and uses one memory for both. That lets us do what neither can: connect what happens on calls to how each rep improves.

	PitchSense AI	Sybill	Aida
How they describe themselves	Sales intelligence with one shared memory	"Context for your revenue team"	"AI Chief of Staff for your reps"
What the memory covers	Calls, emails, Slack, deals, content, skills and practice, in one place	Calls, emails, CRM, Slack	Each rep's own activity ("Digital Twin"), plus deal context
Call intelligence	Yes	Yes	Yes
Deal intelligence	Yes	Yes	Yes
Content intelligence	Library with AI search, built into calls and practice	Asset generation via chat	Via add-on connections
One-pagers, decks and proposals in your brand	Yes, personalised from calls and the deal; exports to PDF, PPTX, DOCX	Decks and battlecards through chat; brand guidelines not mentioned	Proposals mentioned, no detail

	PitchSense AI	Sybill	Aida
Coaching	Scores on real calls, one-click drills, before-and-after results	Chat prompts that review calls	Tips from real calls shown in the next brief
Practice with an AI buyer	Yes: voice roleplays, 11 scenarios, 3 languages	No	No
Readiness per rep and skill	Yes	No	No

The story we tell

1. **One memory, not five tools.** Calls, deals, content and coaching share what they know, so each is smarter than it would be alone.
2. **Intelligence you can check.** Every answer links to the moment it came from.
3. **Coaching that closes the loop.** We find the gap on a real call and help the rep fix it. Then we check the next call. Nobody else in this group can show that.
4. **Fair to reps.** Weaknesses stay between a rep and their manager. Admins see adoption, never scores.

Where practice fits: it's the proof point, not the headline. Lead with intelligence and memory. Bring in practice when the buyer asks about coaching, ramp or enablement. It's the moment we pull clearly ahead.

Don't say: that Sybill or Aida are bad. Say "they record and remember deals; we also help your people get better at them."

Part 2: The toolkit

How to use this doc

Cut every new piece of content from the sections below; change only the length and tone for the reader.

You're making	Start from	Add
Landing page	The problem, Our answer, Connecting the dots, What PitchSense does	Proof points, screenshots
One-pager for outreach	Our answer (30 words), The problem, 3 use cases for the reader's role	One proof point and a call to action
Design agency brief	Our answer, Who buys (in Use cases), How it fits together	Brand assets, sitemap, deadlines

You're making	Start from	Add
	(Appendix), Voice and words	
Personalised proposal	Use cases for the buyer's roles, What PitchSense does, What makes us different	Their call notes, pricing, rollout plan
Sales deck	Every section in order	Screenshots and a demo flow

Before anything goes public, check the last section, What's built, in build and planned.

Messaging

One promise, five value props and one proof point that sets us apart. Every piece of copy should trace back to these.

The promise: Know every deal, coach every rep, forget nothing.

30 words

PitchSense AI understands every sales call and deal and keeps it in one shared memory. Reps get briefs, follow-ups, on-brand proposals and practice. Managers see every deal clearly and coach what matters.

100 words

Your team's best knowledge is scattered: in recordings nobody replays, CRM fields nobody fills, decks nobody can find, and managers' heads. PitchSense AI brings it together. It captures every call, understands what was said and promised, and links it to the deal. It remembers all of it in one memory your company owns. Before a call, reps get a brief with everything that matters. After it, they get a summary, a follow-up draft, tracked commitments, and a one-pager or proposal in your brand. Managers see which deals are at risk and which skills need work. Reps practise hard moments with an AI buyer.

Value prop	Headline	What backs it	Best for
Understand every call	Every call, understood and remembered	Capture everywhere, summaries with receipts, pre-call briefs	Reps, RevOps
See every deal clearly	The real story of every deal, from what was actually said	Commitments, deal risks, connected history, CRM updates; promises tracked across calls, email and Slack; follow-ups drafted and sent on approval	Sales leaders, managers, RevOps
The right answer in	Your best content, in	Content Library, AI	Enablement, reps

Value prop	Headline	What backs it	Best for
every conversation	every conversation	search with sources, content suggested for each call	
Material ready to send	A proposal in your brand, written from what the buyer said	One-pagers, decks and proposals from calls and the deal, in your brand guidelines; PDF, PPTX, DOCX	Reps, Marketing
Coach every rep, every week	Coach what matters and see it change	Scores on real calls, one-click drills, AI roleplays, readiness	Managers, Enablement
Underneath all five: one shared memory	Sales AI that remembers everything	Memory across calls, deals, content and coaching; receipts on every answer	Every buyer

Headline bank

- Know every deal. Coach every rep. Forget nothing.
- The sales AI that remembers everything.
- Every conversation, understood and remembered.
- Your team's memory, finally in one place.
- Intelligence you can check.
- They record deals. We also help your people win them.
- A proposal in your brand, written from what the buyer said.
- Promises tracked across calls, email and Slack.

Suggested landing page order

1. Hero: headline, 30-word pitch, "Book a demo"
2. The problem: scattered, forgotten knowledge
3. Connecting the dots: the example, the diagram and the three layers
4. Four areas: calls, deals, content (including on-brand sales material) and coaching, one block each with a screenshot
5. The agent: ask anything, nothing without approval
6. Use cases by role, in tabs (Rep, Manager, RevOps, Enablement, Marketing, Leader)
7. Why PitchSense: comparison and the practice proof point, with "Try a roleplay" as a secondary call to action
8. Proof: logos, quotes, numbers
9. Integrations strip, including PDF, PPTX and DOCX export
10. Security and privacy: fair-to-reps visibility, receipts, company-owned memory
11. Final call to action

Voice and words

We sound like a sharp sales leader who has seen it all: direct, calm, on the rep's side. Plain words, short sentences, no hype.

- **Direct.** Say what it does. "Summarises the call", not "unlocks conversational insights".
- **On the rep's side.** Reps are the heroes. Never "monitor" or "track your reps".
- **Confident, not loud.** Contrast the category ("call recorders", "notetakers"), not competitors by name, in public copy.
- **Specific.** Minutes, real situations ("a CFO pushing on ROI"), not adjectives.
- **Show the receipt.** When we claim something, say where it came from. Our product works that way too.

Sybill is casual and cheeky; Aida is punchy and invents category words ("Digital Twin"). We stand apart by being calm, clear and checkable.

Words we use (these match the product screens)

Say	Means	Don't say
Rep	The seller	User, agent, learner (except for training-style customers)
Memory	Everything PitchSense knows about your calls, deals, content and team	Context graph, digital twin, brain
Brief / pre-call brief	The prep note before a meeting	Dossier, battlecard
Commitment	A promise made on a call, by either side	Action item, to-do
Risk (Watch / At risk)	A named warning sign on a deal	Risk score, health score
Content Library	Your uploaded documents	Library, knowledge base
Sales content	One-pagers, decks and proposals PitchSense creates for a buyer	Collateral, assets (in customer copy)
Brand guidelines	Your templates, fonts, colours, logos and approved messaging	Brand kit, style pack
Roleplay	A practice conversation with an AI buyer	Rehearsal, simulation, mock call
Drill	A 5-7 minute practice on one skill	Exercise, quiz
Ready / Not ready	Whether a rep has passed a	Certified, passed

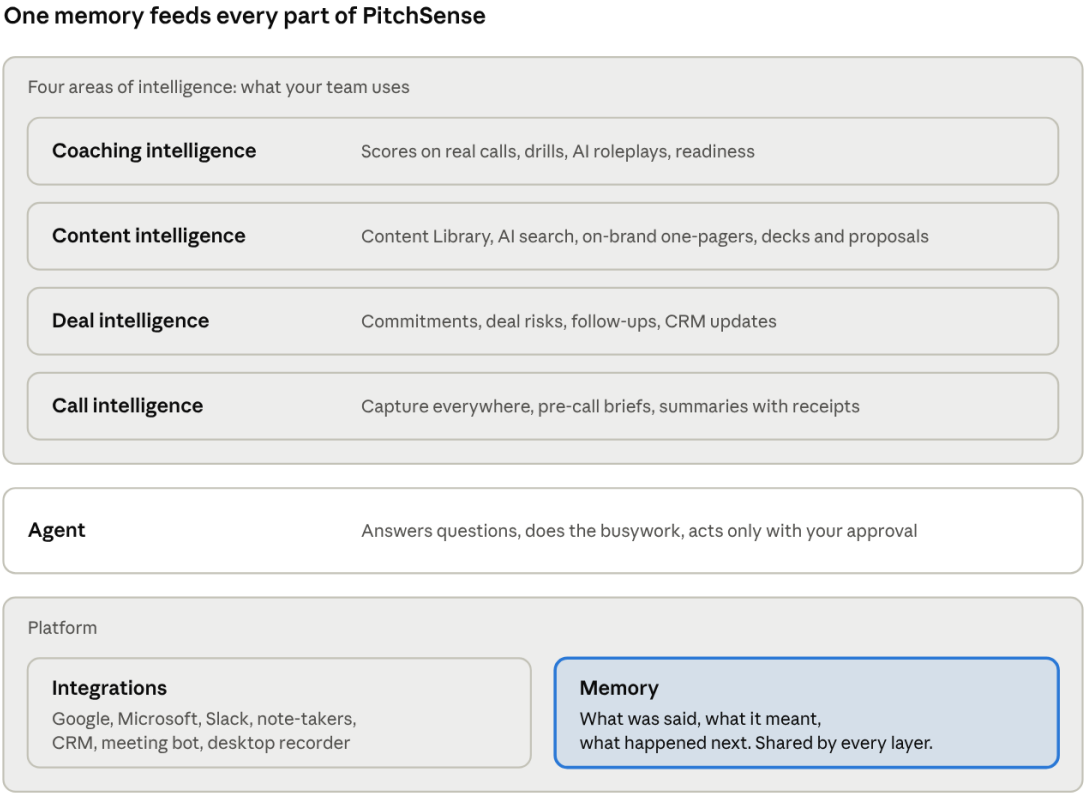

Say	Means	Don't say
	scenario	
Practice	Where roleplays and assignments live	Coaching (coaching is what managers do)

Words to avoid everywhere: revolutionary, game-changing, unlock, supercharge, leverage, seamless, "AI-powered" as a headline on its own.

Appendix

How it fits together

PitchSense is built in three layers. At the bottom, integrations and one shared memory. Above them, an agent that does the work. On top, four areas of intelligence the team uses every day.

PitchSense stack · platform, agent, four intelligence areas

Integrations bring every call, email and document in. Memory keeps it, and every area above reads from the same memory.

Who uses it (the four roles in the product)

Role	What they do in PitchSense	Main screens
Rep	Preps for calls, works follow-ups and commitments, creates sales material, practises hard moments	Home, Calls, Deals, Accounts, Practice, Content Library
Manager	Everything a rep does, plus sees the team's deals and skills, and coaches	Home (with Coaching), Team, Practice
Enablement	Manages content and brand templates, builds practice, sets the skills the team is scored on	Content Library, Practice Library, Standards
Org Admin	Invites people, connects tools, checks adoption	Members, Integrations, Settings

Org Admins see adoption, never a rep's scores. A rep's weaknesses are shown only to their direct manager. That's a selling point for reps who distrust "surveillance" tools.

What's built, in build and planned

As of 30 Sep 2026, 19 capabilities are built, 12 are in build and 11 are planned. Website copy should lean on the built list. Proposals can name in-build and planned items with a date.

Built

1. Calendar sync and a list of every call
2. Transcripts from Google Meet, Microsoft Teams, Fireflies, Fathom and Granola
3. Call summaries shaped to the call type, with links to the transcript
4. Summaries delivered to Slack
5. Pre-call brief in Slack 30 minutes before each meeting
6. Meeting type detection (discovery, demo, pricing and more)
7. Accounts and contacts created automatically, with company research
8. Home: one list of what needs each rep today
9. Content Library with AI search and sources
10. Practice built from your own documents
11. AI voice roleplays: 11 scenario types, 3 languages, micro roleplays
12. Tracks (learning paths)
13. Skills and scoring set by Enablement
14. Scores with evidence on every practice session
15. Readiness per rep and scenario
16. Coaching suggestions for managers
17. One-click drills with before-and-after results
18. Agent answers about practice, team skills and content, with sources
19. Members, teams and integrations admin

In build

1. Memory layers two and three: what calls meant, and what happened next
2. Commitments tracking
3. Deal risks (Watch / At risk)
4. Follow-up email drafts
5. Summaries by email and Microsoft Teams
6. Meeting bot
7. Contact research (job titles, LinkedIn)
8. Pre-call drill tied to a specific upcoming call
9. Deal and account pages with connected call history
10. Agent proposals that a person approves
11. Reading email for deal context (Gmail, Outlook)
12. Promise tracking across email, as part of commitments

Planned

1. Desktop recorder
2. CRM connection (Salesforce, HubSpot) and CRM updates
3. Sending approved follow-up emails
4. Scoring real calls on your skills
5. Content suggested for each call and follow-up
6. 1:1 agenda
7. Agent answers about calls, deals and accounts
8. Sales content creation: personalised one-pagers, decks and proposals in your brand guidelines, exported to PDF, PPTX and DOCX
9. Reading deal conversations in Slack
10. Missed-promise follow-up drafts across calls, email and Slack
11. Deal status kept current from email and Slack

Main-flow claims that rest on in-build or planned items. Check these before any public use:

- The CRM use cases
- "Checks the score on the next real call"
- The board-meeting question to the agent
- The security doc suggested from the Content Library
- Everything about creating one-pagers, decks and proposals
- Connecting the dots (the pricing example)
- Everything about email and Slack tracking
